

J - Journey of the Seeds

Seeds are needed to make life grow.
But how do seeds get up and go?

People can help seeds turn to plants,
put them in the ground with careful hands.

Some seeds fall into water and away they float.
They journey to places like little boats.

Seeds can stick to fur, or even clothes.
So they hitch a ride on down the road.

Light fluffy seeds can fly through the air.
That's how they get from here to there.

Animals can drop seeds out with their poo.
It sounds kind of yucky, but it's what they do.

Seeds go on a journey, hoping to grow,
making more seeds that get up and go.

Day 3

- 1) Why do we need seeds?
 - a. They grow into plants that we eat.
 - b. They help the land.
 - c. They help forests.
 - d. All of the above.

- 2) What would happen if we didn't have seeds?
 - a. There would not be animals or bugs.
 - b. Trees, plants and forests would not live.
 - c. We would not have any water.
 - d. If we didn't have seeds, we could not eat.

- 3) What would be another good title for this song?
 - a. Plants are Cool!
 - b. Seeds on the Move!
 - c. Enter the Dragon
 - d. Forests are Alive!
